ABRIDGED AUDITED FINANCIAL RESULTS FOR THE YEAR ENDED 31 DECEMBER 2020

CHAIRMAN'S STATEMENT

l am pleased to present the financial results of Stanbic Bank Zimbabwe Limited ("the Bank" or "Stanbic Bank Zimbabwe") for the year ended 31

Operating environment in the country

The global economy has been adversely impacted by the COVID-19 pandemic throughout 2020. Similarly, Zimbabwe's economic performance was not spared from the devastating impact of this deadly virus, especially during the lockdown periods. Other perennial challenges constraining economic growth prospects include erratic weather/rainfall patterns in 2020, low business confidence and high inflation levels. Gross Domestic Product (GDP) is estimated to have declined by 4.1% according to the Reserve Bank of Zimbabwe.

On a promising note, during the last quarter of 2020, some of the Government's efforts aimed at promoting price stability have started to bear positive outcomes as evidenced by the relative stability in both the official (at a range of USD1:ZWL81-83) and the black market pricing. Annual inflation also declined from a high of 837.5% in July 2020 to 348% by December 2020. The stability in the exchange rate and inflation are largely attributed to the slowdown in ZWL money supply growth and improved foreign currency availability to the productive sectors of the economy through the introduction of the weekly foreign exchange auction system.

The Bank registered an inflation adjusted profit after tax of ZWL1.1 billion for the year ended 31 December 2020, growing from a prior period loss after tax of ZWL44 million. Under the historical cost accounts, a profit of ZWL3.1 billion was recorded in 2020, exceeding comparative period performance of ZWL477 million.

Capital
The Bank has ended the year with a qualifying core capital of ZWL3.8 billion (2019:ZWL651.2 million) against the regulatory minimum of ZWL25 million and has remained ahead of the 2021 minimum capital threshold which is the local currency equivalent of USD30 million.

Outlook

The outlook to the year 2021 remains grim on account of the resurgence in the number of COVID-19 infections. Sustenance of the positive developments achieved in the second half of 2020 will be hugely dependent on the impact of COVID-19 in the outlook and potential Government interventions to control any adverse developments. The GDP growth rate of 7.4% projected by Government for 2021 could be at risk if the impact of COVID-19 on economic performance is not significantly mitigated through availability of a sustainable and affordable vaccine.

Corporate governance
The Bank continues to maintain high standards of corporate governance, ensuring that its conduct is within the parameters set by both local and international best practice. It complies with regulatory and corporate governance requirements and is committed to advancing the principles and practice of sustainable development and adherence to the laws of the country.

During the period under review, the Bank complied with all regulatory requirements in all material respects.

The Board and its sub-committees meet at regular intervals during the year and on account of the new ways of work, the governance meetings were mostly convened online. The record of attendance of each director is as follows for the year ended 31 December 2020:

DIRECTOR'S NAME	MAIN BOARD	AUDIT	LOANS REVIEW	CREDIT	RISK	п

- ** Not a member
- > Became a member on the 11th of May 2020

As at 31 December 2020, the Board comprised twelve directors, three of whom are executive directors. The Board continues to have an appropriate level of independence and diversity for deliberations and objectivity, with the right mix of competencies and experience. To ensure continued competence, the members undergo an annual Board evaluation process. The Board is responsible for the overall corporate governance of the Bank, including matters of Board remuneration and nominations, dispute resolution, ensuring that appropriate controls, systems and practices are in place.

Board Committees

The Board Audit Committee
The committee meets at least four times a year. During the year ended 31 December 2020, the committee held four meetings.

As at 31 December 2020 the committee comprised of three independent non-executive directors. The role of the committee is to provide an independent evaluation of the adequacy and efficiency of the Bank's internal control systems, accounting practices, information systems and

There is extensive communication between the Board, executive management, compliance, internal audit and external audit in order to ensure that the Board Audit Committee mandate is effectively discharged. The committee liaises with the external and internal auditors on accounting procedures and on the adequacy of controls and information systems, and reviews the financial statements, considers loss reports, and the effectiveness of the Bank's compliance plan using a risk based approach.

Board Loans Review Committee
In terms of the mandate, the committee shall meet at least four times annually and may convene meetings more often as and when necessary. During the year ended 31 December 2020, the committee held six meetings.

The Loans Review Committee reviews customer facilities and the adequacy of impairment provisions. It also considers other risk issues in relation to the structure of the Bank's balance sheet as a result of changes in the operating enviro

The committee comprises three independent non-executive directors.

Board Credit Committee

This committee meets at least four times a year, with additional meetings being convened when necessary. During the year ended 31 December 2020, the committee held four meetings.

The Board Credit Committee is tasked with the overall review of the Bank's lending policies. During each meeting, the committee deliberates and considers credit applications beyond the mandate of the Credit Risk Management Committee.

The Board Credit Committee comprises five non-executive directors, including the Board Chairman.

Board Risk CommitteeThe committee is expected to meet at least four times a year and during the year ended 31 December 2020, the committee held four meetings.

As at 31 December 2020 the committee comprised four non-executive directors, three of whom are independent. The committee reviews and assesses the integrity of the risk control systems and ensures that risk policies and strategies are effectively identified, managed and monitored in order to contribute to a climate of discipline and control, which will reduce the opportunity of risk, including fraud, in all areas of operation in line with the requirements of the Banking Act as amended. This committee has authority for overseeing matters of financial and strategic risk, legal and consumer protection issues. The Committee oversees human capital matters and in need, these issues are tabled and determined at a Board level.

nittee is expected to meet at least four times a year and during the year ended 31 December 2020, the committee held four meetings

As at 31 December 2020 the committee comprised five non-executive directors, all of whom are independent. The committee's responsibility is to ensure that prudent and reasonable steps are taken with respect to Information Technology ("IT") governance. The committee reviews and assesses risks associated with IT including disaster recovery, business continuity and IT security. This committee has authority for overseeing matters of Information Technology risk including the cultivation and promotion of an ethical IT governance and management culture and awareness.

Asset and Liability Committee
Though not a Board committee, the Asset and Liability Committee is a key management committee that meets a minimum of ten times a year.
The membership is comprised of seven strategic members of executive management. During the year ended 31 December 2020, the committee held twenty-four meetings

The committee is responsible for monitoring compliance with policies and for implementing strategies in respect of liquidity, interest rates, foreign exchange and market risk. It is also responsible for setting policies on the deployment of capital resources of the Bank.

The Asset and Liability Committee strives to achieve the following objectives

- optimise net interest margins and exchange earnings; achieve a deposit, lending and investment profile consistent with the Bank's budgetary and strategic targets; manage risks within levels which comply with group and/or regulatory limits; establish appropriate pricing levels and rates within laid down limits to achieve objectives; and achieve the budgeted financial position and performance.

Stanbic Bank Nominees (Private) Limited

guideline for corporates to inform their approach

Stanbic Nominees (Private) Limited
Stanbic Nominees (Private) Limited is a wholly owned subsidiary of Stanbic Bank. It is the nominee company which holds the securities
for investments made by Stanbic Bank clients on the money and equity markets (the Bank's custodial services business), for the purposes of
segregating clients' assets from those belonging to the Bank. The Board for Stanbic Nominees comprises two executive directors and three
independent non-executive directors, who meet on a quarterly basis to review the operations and the risks associated with the custody business.
The assets and income arising from the custody business have been disclosed in note 15.

Description of the process by which the Bank assesses the effectiveness of individual Board members and the Board as a whole The Bank undertakes an annual Board evaluation process as required by the Reserve Bank of Zimbabwe. Weaknesses and areas of concern identified through this process. The areas of concern are discussed in the Board meetings with a view to rectifying the identified weaknesses.

Citizens should be cognisant of the need to take care of each other and the world around us. Sustainable Development Goals (SDGs) are a useful

Zimbabweans were not spared from the effects of the COVID-19 pandemic. The water treatment chemicals purchased by various organizations through our support will go a long way in helping with the provision of clean and safe water which is key in the prevention of the COVID-19 spread. Sanitizers also fall in this category in which a total of USD145 000 was paid on behalf our customers to procure sanitizers and sterilization chemicals. We also facilitated the acquisition of medicines and hospital equipment by some of our customers in the health sector totaling USD2.5

Further, we supported a large corporate client with foreign currency to enable them to continue producing ethanol which is the key ingredient in producing alcohol-based sanitizers. A guaranteed local supply of ethanol currency that local manufacturers of hand sanitizers can rely on a readily available raw material without having to import and spend more foreign currency than necessary. The provision of foreign currency was made to some pharmaceutical producers for the purchase of raw materials necessary to manufacture drugs, to help ensure the health sector maintains the required levels of medication for patients.

Our Chief Executive's report gives greater detail of the important work we are doing in the CSR space

My profound appreciation goes to our valued clients, stakeholders and shareholders for their unwavering support in an extremely challenging operating environment. I express my gratitude to Board members for their wise counsel and guidance as they steered the Bank in the midst of increasing headwinds. My special thanks goes to management and staff for their commitment and dedication in a tough operating environment which was worsened by the outbreak of the deadly COVID-19 pandemic, requiring the Bank to quickly adapt to the new ways of working as we

On the 4th of December 2020, Mrs Aisha Thuliswa Nyamweda (nee Tsimba) unfortunately passed away after a short hospitalisation. Aisha was the Bank's Company Secretary and Legal Executive. She had served the Board and the Bank with passion and impact since she joined in 2003.

Following a successful tenure as Chief Executive for over 13 years, Mr Joshua Tapambgwa has retired from the Bank's management team and Board effective 31 December 2020. I thank Joshua for steering the Bank ably during some very challenging years in Zimbabwe's operating environment. I am grateful for his immeasurable contribution to the Bank and wish him well in his future endeavours.

On behalf of the Board, I take this opportunity to extend congratulations to Mr Solomon Nyanhongo and Mr Tafadzwa Mahachi who have been appointed Chief Executive and Chief Financial Officer, respectively. I wish them well in their new roles and assure them of the Board's support.

Gregory Sebborn Chairman

Overview of business results for 2020

CHIEF EXECUTIVE'S REPORT

I am pleased to present my first report as the Chief Executive of Stanbic Bank Zimbabwe Limited. I would like to express my gratitude to my predecessor, Mr Joshua Tapambgwa, who retired from the Bank with effect from 31 December 2020, having served as Chief Executive for the past thirteen years. I thank Joshua for his mentorship and support over the years.

2020 was a difficult year in which the economy was confronted by innumerable challenges ranging from a soaring inflationary environment, foreign currency challenges, and declining aggregate demand. This was worsened by the devastating impact of the COVID-19 pandemic which disrupted business operations across the world. Stanbic Bank's performance was not spared from the adverse impact of the pandemic. The Bank invoked its business continuity plans in order to serve clients whilst observing the recommended health and safety measures.

The Bank closed the year 2020 with an inflation adjusted profit after tax of ZWL1.1 billion, growing from a loss of ZWL44 million in the comparative period. On a historical cost basis, a profit after tax of ZWL3.1 billion was achieved during the period up from ZWL477 million recorded in 2019.

The 2020 inflation adjusted net interest income declined by 18% from ZWL2 billion in 2019 to ZWL1.7 billion, despite the strong growth in our gross lending book from an inflation adjusted balance of ZWL4.3 billion to ZWL9 billion as demand for local currency funding continued to increase in line with growing working capital requirements. During the year, lending rates remained subdued and could not match the 14% average month on month inflation on account of regulatory constraints and, in turn, contributed to the receding interest income.

The Bank recorded a 53% increase in its net fee and commission income, growing from ZWL1.7 billion in 2019 to ZWL2.6 billion. The improvement in our fee and commission income was largely underpinned by the impact of the rapid depreciation of the local currency against the USD on our foreign denominated commission income

The 2020 inflation adjusted credit impairments of ZWL761 million increased by 24% from ZWL614 million in the prior period largely because of the growth which was experienced in our interest earning assets which included lending and short-term financial investments. In addition, the Bank carried out an assessment of the impact of COVID-19 pandemic on the quality of the lending book especially in key sectors of the economy such as agriculture, manufacturing and tourism, and in turn additional impairments were recognised in the period.

The Bank's inflation adjusted operating expenses grew by 24% from ZWL4.3 billion in 2019 to ZWL5.3 billion. This growth was largely on account of the impact of exchange rate movements on our foreign denominated operating expenses which include, among others, licence fees, data lines, insurance and franchise fees. Unexpected expenses were incurred during the period in an effort to combat the spread of the pandemic for the safety of our customers and staff.

During the year, the working capital requirements for our customers continued to increase as the purchasing power of money was extensively eroded by the inflationary environment. This saw the Bank's historical cost net lending book growing from ZWL939 million in 2019 to ZWL8.9 billion as all energies were directed at supporting our customers during this difficult period. The Bank's customer deposit base grew on a historical cost basis from ZWL5.6 billion in 2019 to ZWL35.5 billion largely reinforced by the impact

of the continued weakening of the local currency against the USD on our foreign denominated customer deposits which had increased sharply in local currency terms. This was on the back of the unexpected increase in money supply from ZWL10.5 billion in 2019 to ZWL154.47 billion.

Compliance and money laundering control function
Stanbic Bank is committed to maintaining the highest standards of compliance with regulatory and policy requirements, while considering local and international developments. The Bank has a comprehensive compliance framework which seeks to meet all requirements of regulators, governing bodies and stakeholders including the Bank's parent company, Standard Bank Group. An independent Compliance monitoring function provides effective assurance within the overall risk management framework of the Bank under the oversight of the Board of Directors.

The Bank supports international efforts to combat money laundering and terrorist financing and complies with the requirements of the Money Laundering and Proceeds of Crime Act [Chapter 9:24] as well as related directives and standards. Investment in key compliance infrastructure and resources is ongoing, with the objective of mitigating the Bank's compliance risks and aligning its business conduct to international best practice.

Statement on corporate social investment ("CSI") responsibilities
Stanbic Bank Zimbabwe believes that if every member of society is engaged in helping the community, as best as they can, we will build a better

Our 2020 activities focused mainly on COVID-19 relief as the world continues to fight the pandemic. Through a USD200 000 fund, we provided various designated COVID-19 centres with Personal Protective Equipment (PPEs), PCR test kits, ventilators and sanitizers. At the same time, two boreholes in the high-density suburbs of Glen Norah in Harare and Cowdry Park in Bulawayo were also drilled to ease water shortages and help curb the spread of the virus.

Although some of our annual donations were disrupted by the pandemic, the Albino Charity Organization of Zimbabwe's ("ALCOZ") needs remain critical as the beneficiaries greatly depend on the skin protection soaps and lotions for their day-to-day activities. We supported ALCOZ with 1000 units of each of the following necessities: sunscreen lotions, antiseptic soaps, antiseptic liquid, sunhats and lip balms.

Education remains key for sustainable social investment, therefore, in addition to our ongoing bursary program for tuition fees and laptops, we partnered Africa University to support five more students from their university with the same requirements. Furthermore, the construction and furnishing of a block of two classrooms at the Nyarutombo Primary School in Muzarabani was completed. Toilets and a borehole to serve both the school and the community were also part of this development as we contributed in assisting the school to achieve Examination Centre status, relieving grade seven students from the current 20 km walk to the nearest examination centre

St Mary's Mission in Wedza faces water challenges mainly brought about by the depressed 2019-2020 rainy season. We drilled a borehole at St Mary's Mission Hospital to help ease the water crisis being faced by the institution and the community.

In our efforts to further reduce infant and maternal mortality rates following the successful completion of Nyamuzuwe Waiting Mothers' Home project in Mutoko, we are currently refurbishing one theatre at Sally Mugabe Central Hospital Maternity ward. The theatre will be fully equipped with the equipment requested by the hospital to help with Caesarean deliveries at the public hospital, as we support the government's call to make maternity healthcare free in public institutions.

As concerns for preservation of the environment remain topical world over, we took the initiative to run an awareness campaign aimed at imparting can play their partnership with Redan Private Limited and endorsed by the Environmental Management Agency

Our people
I am highly indebted to the Blue Bankers who worked tirelessly and remained resolute in serving our clients as we introduced new ways of working following the outbreak of the COVID-19 pandemic. The health and safety of our staff members remains key during these trying times. The Bank will continue to invest in the relevant personal protective equipment as the country battles to contain this pandemic.

On 5 December 2020, our Head of Legal, Aisha Nyamweda, who had served the Bank over the past seventeen years, passed on. Our thoughts are with her family. We shall miss her energy at the Bank.

We remain resolute and dedicated to our five strategic pillars, with Client Centricity being the bedrock, Indeed, 2020 was a challenging year which demanded versatility from most of us, and we achieved success through improved digital channels and ensuring smooth workflow as new ways of working were adopted during the period. As we continued to foster social distancing, the Bank introduced several digital solutions in our quest to offer matchless customer experience during these trying times. As we start the year 2021, we look forward to rolling out more digital solutions as attention remains directed at enriching our customer experience.

As always, I remain grateful to our management and staff for their commitment and resilience in an increasingly turbulent operating environment which was exacerbated by the onset of the deadly respiratory disease. The hard work that has been demonstrated by the Blue Bankers during the period contributed substantially to the achievement of this set of results. I am grateful to our Board members for their wise counsel and direction in an immensely challenging operating environment

Solomon Nyanhongo Chief Executive

The significant accounting policies applied in the preparation of the financial information are set out below. The accounting policies applied in the preparation of these financial statements from which the results have been derived are in terms of IFRS and are consistent with the accounting policies applied in the preparation of the Bank's previous annual financial statements with the exception of changes referred to under the basis of preparation paragraph below.

AUDITOR'S STATEMENT

These financial results should be read in conjunction with the full set of inflation adjusted financial statements for the year ended 31 December 2020, which have been audited by the Independent Auditors, KPMG Chartered Accountants (Zimbabwe). The Independent Auditors have issued a qualified opinion on the inflation adjusted financial statements because of non-compliance with International Financial Reporting Standard IAS 21

- The Effects of Changes in Foreign Exchange Rates (IAS 21) in the prior year and the impact of this non-compliance on the comparative financial information and the carrying value of equipment and intangible assets. The Independent Auditors' report includes key audit matters (KAMs). The KAMs include, valuation of owner occupied property and investment property, expected credit loss allowance on legacy debt asset, expected credit loss allowance on legacy debt asset, expected credit loss allowance on loans and advances and financial reporting in hyperinflationary economies. The Independent Auditors' report on the financial statements is available for inspection at the Bank's Registered Office.

Statement of compliance

The Bank's financial statements have been prepared in accordance with International Financial Reporting Standards ("IFRS"), as issued by the International Accounting Standards Board ("IASB"), and in the manner required by the Companies and Other Business Entities Act of Zimbabwe (Chapter 24:31), the Banking Act of Zimbabwe (Chapter 24:20). The financial statements are based on the statutory records, which are maintained under the historical cost convention, as restated to take account of the effects of inflation in accordance with International Accounting Standard 29, 'IAS 29' (Financial Reporting in Hyperinflationary Economies).

With effect from 1 July 2019, Zimbabwe was a hyperinflationary economy as the three-year cumulative inflation figure was above 100%. IAS 29 (Financial Reporting in Hyperinflationary Economies) requires that financial statements prepared in the currency of a hyperinflationary economy be stated in terms of the measuring unit current at the balance sheet date. The same standard discourages the presentation of historical financial statements when inflation-adjusted financial statements are presented. The inflation adjusted financial information is the principal financial information. However, historical results have been included to allow comparability of results. The Zimbabwe Accounting Practices Board and the $Zimbabwe \ Stock \ Exchange \ have \ permitted \ companies \ in \ Zimbabwe \ to \ present \ historical \ results \ in \ conjunction \ with \ inflation-adjusted \ results.$

Accordingly, the financial statements and the corresponding figures for the previous period have been restated to take account of the changes in the general purchasing power of the Zimbabwe dollar and as a result are stated in terms of the measuring unit current at the balance sheet date. The restatement is based on conversion factors derived from the Zimbabwe Consumer Price Index (CPI) compiled by the Zimbabwe Central Statistical Office. The indices and conversion factors used were as follows:

Date	Indices	Conversion factors
December 2020	2 474.51	1.0000
December 2019	551.57	4.48632

5 421 335

ABRIDGED AUDITED FINANCIAL RESULTS FOR THE YEAR ENDED 31 DECEMBER 2020

S S

COVID-19 pandemi

The resurgence of the COVID-19 pandemic in January 2021 has seen a national lock down period being implemented in Zimbabwe with the aim of reducing the spike which had been experienced in the number of COVID-19 infections in the country. The Bank implemented its business continuity plans which resulted in a reduction in the number of staff that are working from the offices as we strive to combat the spread of the disease. The impact of the second wave of the COVID-19 pandemic is currently being assessed and will be included in our 2021 forecast. We are currently reviewing the quality of the lending book considering the impact of the pandemic on business operations especially in the agriculture, manufacturing and tourism sector. Engagements are underway with our clients in order to identify areas where they need support during this

In an effort to alleviate the impact of COVID-19 on our customers' businesses, some facilities had been restructured during the period through the deferment of both interest and capital to customers especially in the tourism sector as the pandemic has hobbled operations in this sector

Functional and presentation currency

Items included in the financial statements are measured using the currency of the primary economic environment in which the entity operates ("functional currency"). The financial statements are presented in Zimbabwe dollar ("ZWL"), which is the functional currency of Stanbic Bank Zimbabwe Limited. All amounts are stated in thousands of Zimbabwe dollars (ZWL'000), unless indicated otherwise.

New standards, amendments and interpretations, effective for accounting periods beginning on 1 January 2020 adopted by the Bank

Standard ("IFRS/IAS")/		
Interpretation	Content	Applicable for financial years beginning on/after
IFRS 3	Business Combinations (amendment)	Annual periods beginning on or after 1 January 2020
IFRS 7	Financial Instruments: Disclosures	Annual periods beginning on or after 1 January 2020
IAS 16	Property, Plant and Equipment	
	(amendments)	Annual periods beginning on or after 1 January 2020
IAS 37	Provisions, Contingent Liabilities and	
	Contingent Assets (amendments)	Annual periods beginning on or after 1 January 2020

IFRS 3 Business Combinations (amendment) (IFRS 3), the amendment clarifies the definition of a business, with the objective of assisting entities to determine whether a transaction should be accounted for as a business combination or as an asset acquisition. The amendment will be applied prospectively.

IFRS 7 Financial Instruments: Disclosures (IFRS 7), IFRS 9 Financial Instruments (amendments) (IFRS 9) and IAS 39 Financial Instruments: Recognition and Measurement (IAS 39). Interest Rate Benchmark Reform resulted in amendments to IFRS 9, IAS 39 and IFRS 7 requirements for hedge accounting to support the provision of useful financial information during the period of uncertainty caused by the phasing out of interest-rate benchmarks such as interbank offered rates (IBORs) on hedge accounting. The amendments modify some specific hedge accounting requirements to provide relief from potential effects of the uncertainty caused by the IBOR reform. In addition, the amendments require companies to provide additional information to investors about their hedging relationships which are directly affected by these uncertainties. The amendment will be applied retrospectively.

IAS 16 Property, Plant and Equipment (amendments) (IAS 16). Narrow-scope amendments to IAS 16 for the accounting of amounts received when selling items produced while an entity is preparing an asset for its intended use. The amendments clarify the accounting requirements in prohibiting the entity from deducting such amount from the cost of property, plant and equipment and instead recognising such sales proceeds and related cost in profit or loss. The amendments will be applied retrospectively.

IAS 37 Provisions, Contingent Liabilities and Contingent Assets (amendments) (IAS 37). Narrow-scope amendments to IAS 37 in determining which costs to include in estimating the cost of fulfilling a contract for the purposes of assessing whether that contract is onerous. The amendments clarify that the cost of fulfilling the contract includes both the incremental costs of fulfilling the contract and an allocation of costs that relate directly to fulfilling contracts. The amendments will be applied retrospectively. Adjusting prior periods is not required, but rather adjusting the opening Retained Earnings with the cumulative effect of the amendments on transition date

The adoption of new and amended standards on 1 January 2020 did not affect the Bank's previously reported financial results, disclosures or accounting policies and did not impact the Bank's results upon transition

RISK MANAGEMENT AND CONTROL

Overview

Effective risk management is fundamental to the business activities of Stanbic Bank Zimbabwe Limited (the "Bank" or "Stanbic Bank"). Whilst we remain committed to the objective of increasing shareholder value by developing and growing our business in a way that is consistent with our Board determined risk appetite, we are also cognisant of the need to balance this objective with the interests of both our depositors and regulators. We seek to achieve an appropriate balance between risk and reward in our business and continue to build and enhance the risk management capabilities that assist in delivering our growth plans in a controlled environment.

Risk management is at the core of the operating structures of the Bank. The Bank seeks to limit adverse variations in earnings and equity by managing the risk exposures and capital within agreed levels of risk appetite. Managing and controlling risks, minimising undue concentrations of exposure and limiting potential losses from stress events are all essential elements of the Bank's risk management and control framework. This framework ultimately leads to the protection of the Bank's reputation.

Responsibility and accountability for risk management resides at all levels within the Bank, from the executive down through the organisation to each business manager

Components of risk management are the risk standards that have been developed for each risk type and which set out the principles for the rnance, identification, measurement, management, control and reporting of each risk type. Each standard is approved by the Board Risk committee and is supported by Bank and business unit risk policies and procedures.

Risks are controlled at the level of individual exposures and at portfolio level, as well as in aggregate across all businesses and risk types. An objective view of risk taking activities is taken, in particular to balance the short and long-term interests of the Bank.

Risk appetite is an expression of the maximum level of residual risk that the Bank is prepared to accept to deliver its business objectives. Risk appetite is implemented in terms of various limits, economic capital usage and the risk adjusted performance measures ("RAPM") expected to be achieved, recognising a range of possible outcomes.

The Board establishes the Bank's parameters for risk appetite by:

- providing strategic leadership and guidance;
- reviewing and approving annual budgets and forecasts for the Bank and its business units; and
- regularly reviewing and monitoring the Bank's performance in relation to risk through quarterly Board reports.

The principal risks to which the Bank is exposed and which it manages are defined as follows: Credit risk

- - Credit risk is the risk of loss arising out of the failure of counterparties to meet their financial or contractual obligations when due. Credit risk comprises counterparty risk, settlement risk and concentration risk. These risk types are defined as follows:
 - Counterparty risk: The risk of credit loss to the Bank as a result of the failure by a counterparty to meet its financial and/or contractual obligations to the Bank.
 - Settlement risk: The risk of loss to the Bank from settling a transaction where value is exchanged, but where the Bank may not receive all or part of the countervalue
 - Credit concentration risk: The risk of loss to the Bank as a result of excessive build-up of exposure to a specific counterparty, industry, market, product, financial instrument or type of security, or geography, or maturity. This concentration typically exists where a number of counterparties are engaged in similar activities and have similar characteristics, which could result in their ability to meet contractual obligations being similarly affected by changes in economic or other conditions

Market risk

This is the risk of a change in the actual or effective market value or earnings or future cash flows of a portfolio of financial instruments caused recovery rates, correlations and implied volatilities in all of the above.

Liquidity risk

Liquidity risk arises when the Bank is unable to maintain or generate sufficient cash resources to meet its payment obligations as they fall due, or can only do so on materially disadvantageous terms. This inability to maintain or generate sufficient cash resources occurs when counterparties who provide the Bank with funding withdraw or do not roll over that funding, or as a result of a general disruption in asset markets that renders normally liquid assets illiquid.

Operational risk

Operational risk is the risk of loss resulting from inadequate or failed internal processes, people and systems, or from external events.

Business risk is the risk of loss due to operating revenues not covering operating costs and is usually caused by the following:

- inflexible cost structure, or
- market-driven pressures, such as decreased demand, increased competition or cost increases, or Bank-specific causes, such as a poor choice of strategy, reputational damage or the decision to absorb costs or losses to preserve reputation.

Reputational risk putational risk results from damage to the Bank's image which may impair its ability to retain and generate business. Such damage may result from a breakdown of trust, confidence or business relationships.

Credit risk

Definition Credit risk is the risk of loss arising out of the failure of counterparties to meet their financial or contractual obligations when due

Framework and governance

Credit risk is the Bank's most material risk. It is managed in accordance with the Bank's comprehensive risk management control fra

The Head of Credit has functional responsibility for credit risk across the Bank and reports to the Chief Executive. Furthermore, the credit function is monitored closely by the Standard Bank Africa Credit function, providing an additional layer of review

The Board Loans Review Committee and the Board Credit Committee have an oversight role over the credit risk management process.

Each borrower (counterparty) is assigned a risk grade using an appropriate rating model. Rating models are used to achieve objectivity, comparability, transparency and consistency in the rating assignment process.

Most of the models take into account quantitative factors, financial statements and qualitative factors. These are combined to produce a stand-

The Bank uses a 25-point master rating scale to quantify the credit risk for each exposure. On origination, each client is assigned a credit risk grade within the Bank's 25-point master rating scale. Ratings are mapped to PDs by means of calibration formulae that use historical default rates and other data for the applicable portfolio. These credit ratings are evaluated at least annually or more frequently as appropriate.

SICR trigger (from origination)
Low credit risk
3 rating or more
1 rating or more

CIB exposures are evaluated for SICR by comparing the credit risk grade at the reporting date to the origination credit risk grade. Where the relative change in the credit risk grade exceeds certain pre-defined ratings' migration thresholds or, when a contractual payment becomes more than 30 days overdue (IFRS 9's rebuttable presumption), the exposure is classified within stage 2. These pre-defined ratings' migration thresholds have been determined based on historic default experience which indicate that higher rated risk exposures are more sensitive to SICR than lower risk exposures. Based on an analysis of historic default experience, exposures that are classified by the Bank's master rating scale as investment grade (within credit risk grade 1 - 12 of the Bank's 25-point master rating scale) are assessed for SICR at each reporting date but are considered to be of a low credit risk for IFRS 9 purposes.

Credit risk mitigation

Wherever warranted, the Bank will attempt to mitigate credit risk, including CCR to any counterparty, transaction, sector, or geographic region, so as to achieve the optimal balance between risk, cost, capital utilisation and reward. Risk mitigation may include the use of collateral, the imposition of financial or behavioural covenants, the acceptance of guarantees from parents or third parties, the recognition of parental support, and the distribution of risk.

Collateral, parental quarantees, credit derivatives and on- and off-balance sheet netting are widely used to mitigate credit risk. Credit risk mitigation policies and procedures ensure that risk mitigation techniques are acceptable, used consistently, valued appropriately and regularly, and meet the risk requirements of operational management for legal, practical and timely enforcement. Detailed processes and procedures are in place to guide each type of mitigation used.

In the case of collateral where the Bank has an unassailable legal title, the Bank's policy is such that collateral is required to meet certain criteria for recognition in loss given default (LGD) modelling, including that it:

- is readily marketable and liquid
- is legally perfected and enforceable
 - has a low valuation volatility
 - is readily realisable at minimum expense
- has no material correlation to the obligor credit quality
- has an active secondary market for resale

The main types of collateral obtained by the Bank for its banking book exposures include:

- mortgage bonds over residential, commercial and industrial properties
- cession of book debts
- pledge and cession of financial assets
- bonds over plant and equipment the underlying movable assets financed under leases and

Reverse repurchase agreements and commodity leases to customers are collateralised by the underlying assets.

Guarantees and related legal contracts are often required, particularly in support of credit extension to groups of companies and weaker obligors. Guarantors include banks, parent companies, shareholders and associated obligors. Creditworthiness is established for the quarantor as for other

Other credit protection terms may be stipulated, such as limitations on the amount of unsecured credit exposure acceptable, collateralisation if the mark-to-market credit exposure exceeds acceptable limits, and termination of the contract if certain credit events occur, for example, downgrade of the counterparty's public credit rating.

Wrong-way risk arises in transactions where the likelihood of default (i.e. the probability of default (PD) by a counterparty and the size of credit exposure (as measured by EAD) to that counterparty tend to increase at the same time. This risk is managed both at an individual counterparty level and at an aggregate portfolio level by limiting exposure to such transactions, taking adverse correlation into account in the measurement and mitigation of credit exposure and increasing oversight and approval levels. The Bank has no appetite for wrong-way risk arising where the correlation between EAD and PD is due to a legal, economic, strategic or similar relationship (i.e. specific wrong-way risk). General wrong-way risk, which arises when the correlation between EAD and PD for the counterparty, due mainly to macro factors, is closely managed within existing

To manage actual or potential portfolio risk concentrations in areas of higher credit risk and credit portfolio growth, the Bank implements hedging and other strategies from time-to-time. This is done at individual counterparty, sub-portfolio and portfolio levels through the use of syndication, distribution and sale of assets, asset and portfolio limit management, credit derivatives and credit protection

Analysis of exposure to credit risk

The Bank's exposure to credit risk, varying from normal monitoring to close monitoring as determined by the internal models and as defined in terms of the Bank's rating scale as at 31 December 2020 are set out in the table below

,

Collateral obtained by the Bank

Total exposure to credit risk

It is the Bank's policy to dispose of repossessed assets in an orderly fashion. The proceeds are used to repay the outstanding loan. In general, the Bank does not use repossessed assets for business purposes. The collateral obtained by the Bank as at 31 December 2020 amounted to ZWL1.1 billion (31 December 2019: ZWL746.8 million).

Definition

Liquidity risk arises when the Bank is unable to meet its payment obligations when they fall due. This may be caused by the Bank's inability to liquidate assets or to obtain funding to meet its liquidity needs.

Framework and governance

The nature of banking and trading activities results in a continuous exposure to liquidity risk. The Bank's liquidity risk management framework, which is consistent with the previous financial reporting period, is designed to measure and manage liquidity positions such that payment obligations can be met at all times, under both normal and considerably stressed conditions. Under the delegated authority of the Board of Directors, the Bank's Asset and Liability Committee ("ALCO") sets liquidity risk standards in accordance with regulatory requirements and international best practice. This ensures that a comprehensive and consistent governance framework for liquidity risk management is followed across the Bank. Furthermore, the Bank's parent company (The Standard Bank Group Limited) runs a Group ALCO function that monitors the various indicators in each country where the Group operates, thus ensuring a double layer of coverage for ALCO purposes

The tables below analyse the Bank's exposure to interest rate and structural liquidity risks:

Foreign currency liquidity management

A number of parameters are observed in order to monitor changes in either market liquidity or exchange rates. The use of the ZWL as the primary functional currency in Zimbabwe means that significant foreign currencies to the Bank are the United States Dollar ("USD"), South African Rand ("ZAR") and the Pound ("GBP"). These three foreign currencies (and other minor ones) contribute 46% (2019:56%) of the overall statement of financial position size as depicted below and thus pose a significant foreign currency liquidity risk to the Bank:

Market risk

The identification, management, control, measurement and reporting of market risk is categorised as follows:

Trading market risk

These risks arise in trading activities where the Bank acts as a principal with clients in the market. The Bank's policy is that all trading activities are contained in the Bank's trading operations.

Banking book interest rate risk

These risks arise from the structural interest rate risk caused by the differing repricing characteristics of banking assets and liabilities.

Interest rate risk measurement

The analytical techniques used to quantify banking book interest rate risk include both earnings - and valuation-based measures. Results are monitored on at least a monthly basis by ALCO. The analysis takes cognisance of embedded optionality such as loan prepayments and accounts where the account behaviour differs from the contractual position. Desired changes to a particular interest rate risk profile are achieved through the restructuring of on-statement of financial position repricing and/or maturity profiles and, where appropriate, the use of derivative instruments.

Interest rate risk limits

Interest rate risk limits are set with respect to changes in forecast banking book earnings (net interest income and banking book mark-to-market profit or loss) and the economic value of equity. Economic value of equity sensitivity is calculated as the net present value of aggregate asset cash flows less the net present value of aggregate liability cash flows. All assets, liabilities and derivative instruments are allocated to gap intervals based on either their repricing or maturity characteristics. Assets and liabilities for which no identifiable contractual repricing or maturity dates exist are allocated to gap intervals based on behavioural profiling (obtained through statistical analysis and, if required, expert judgement).

Annual net interest income at risk

Assuming no management intervention, a downward 100bps parallel rate shock on all yield curves would decrease the forecast net interest income $based \ on \ balances \ as \ at \ 31 \ December \ 2020 \ by \ 5.6\% \ (December \ 2019: \ 8.05\%). \ The \ table \ below \ indicates \ the \ ZWL \ equivalent \ sensitivity \ of \ the \ balances \ as \ at \ 31 \ December \ 2019: \ 8.05\%).$ Bank's banking book earnings (net interest income and banking book mark-to-market profit or loss) and other comprehensive income ("OCI") in response to a parallel yield curve shock, before tax.

Market risk measurement

The techniques used to measure and control market risk include:

Daily value-at-risk ("VaR"); and Stress tests.

Daily VaR

The Bank uses the historical VaR approach to derive quantitative measures, specifically for market risk under normal conditions. Normal VaR is based on a holding period of one day and a confidence interval of 95%. The use of historical VaR has limitations as it is based on historical correlations and volatilities in market prices and assumes that future prices will follow the observed historical distribution. The Bank back-tests its VaR models to verify the predictive ability of the VaR calculations, thereby ensuring the appropriateness of models. Back-testing compares the daily hypothetical profit or losses under the one-day buy and hold assumption to the prior day's VaR.

Stress testing provides an indication of the potential losses that could occur in extreme market conditions. The stress tests carried out by the Bank include individual market risk factor testing and combinations of market factors per trading desk and combinations of trading desks. Stress tests include a combination of historical and hypothetical simulations.

Other market risk measures

Other market risk measures specific to individual business units include permissible instruments, concentration of exposures, gap limits, maximum tenor and stop loss triggers. In addition, only approved products that can be independently priced and properly processed are permitted to be traded. All VaR limits are approved by both in-country and The Standard Bank of South Africa Limited ALCOs

The Risk Department independently validates and documents new pricing models and performs an annual review of existing models to ensure they are still relevant and behaving within expectations. In addition, the Risk Department assesses the liquid closing price inputs used to value instruments daily and performs at least a monthly review of less liquid prices from a reasonableness perspective. Where differences are significant, mark-to-market adjustments are made.

Foreign currency risk

The Bank's primary exposures to foreign currency risk arise as a result of cash exposures in currencies other than functional currency. These exposures mainly arise from the proprietary currency trading business undertaken by the Bank's Global Markets Department and are measured using the value-at-risk approach.

Foreign currency value at risk for December 2020

	Maximum possible loss in December 2020 ZWL'000	Minimum possible loss in December 2020 ZWL'000	Average possible loss ZWL'000	Possible loss at 31 December 2020 ZWL'000	Maximum acceptable VaR loss ZWL'000
Normal VaR	204.7	78.7	186.9	96.3	256.5
Stress VaR	999.32	521.04	760.18	570.4	1 529.3

As depicted in the table above, historical trading data for the foreign currency business indicates that the maximum possible loss for any one day's trading in 2020 was ZWL204 700 (2019:ZWL253 677), and the minimum possible loss was ZW78 700 (2019:ZWL265 884), with an average possible loss of ZWL186 900 (2019:ZWL204 508) in comparison to the maximum acceptable possible loss of ZWL256 500 (2019:ZWL510 196).

Risk assessments are an integral part of the overall risk management process and cover the key components of identification, assessment and management of risk. The Bank's risk and control self-assessment ("RCSA") policy operationalises the need for business to perform self-assessments on an annual basis and initiate actions to mitigate risks or control deficiencies.

The Bank uses key risk indicators ("KRIs") to monitor exposures to key risks identified in the RCSA process. The KRI process is an important component in the management of operational risk and contributes to the development of the Bank's operational risk profile

The Bank maintains adequate insurance to cover key operational and other risks. Insurance is not considered as an alternative to effective preventative and detective controls but as a compensatory control, providing protection from the consequences of control failure.

The Bank's approach to managing compliance risk exposures is proactive and premised on internationally accepted principles of risk management and aligned with the methodologies used by the Bank's other risk assurance functions. The Compliance Department provides leadership through specialist support units on compliance with money laundering and terrorist financing control, occupational health and safety and emerging legislative developments. The compliance framework is based on the principles of effective compliance risk management in accordance with the requirements of the Zimbabwe Banking Act (Chapter 24:20) and the Basel Committee on Banking Supervision. The Bank operates a centralised compliance risk management structure

Derivative instruments

The Bank's derivatives are classified as held for trading.

The fair value of a derivative financial instrument represents for quoted instruments the quoted market price and for unquoted instruments the present value of the positive or negative cash flows, which would have occurred if the rights and obligations arising from that instrument were closed out in an orderly market place transaction at year end.

The Bank entered into derivative transactions for trading purposes during the year ended 31 December 2020. The derivatives used by the Bank are foreign exchange contracts. Foreign exchange contracts are contractual obligations to buy or sell financial instruments on a future date at a specified price.

The Bank trades derivative instruments on behalf of customers and for its own positions. The Bank transacts derivative contracts to address customer demand both as market maker in the wholesale markets and in structuring tailored derivatives for customers.

Internal clearing accounts include suspense accounts where transactions are held temporarily and are cleared daily to the appropriate

Included in other receivables is ZWL2.8 billion relating to legacy debts and the effects of allocation of foreign currency to customers with local currency deposits in line with the previous monetary policies prevailing before 1 October 2018. This receivable is a recovery of the foreign currency which over the years has been transferred to the RBZ in line with the exchange control directives of 2012, 2015 and 2016 which required banks to limit their nostro holdings to a certain percentage of their customer deposits with the excess being surrendered to the central bank in return for electronic currency (RTGS\$) which was trading at par to the USD at that time.

Fair value estimation

The table below analyses financial instruments carried at fair value, by valuation method. The different levels have been defined as

- Quoted prices (unadjusted) in active markets for identical assets or liabilities (Level 1).
- Inputs other than quoted prices included within Level 1 that are observable for the asset or liability, either directly (that is, as prices) or indirectly (that is, derived from prices) (Level 2).
- Inputs for the asset or liability that are not based on observable market data (that is, unobservable inputs) (Level 3).

The following table presents the Bank's assets and liabilities that are measured at fair value at 31 December 2020, by the level in the fair value hierarchy into which the fair value measurement is categorised. The amounts are based on the values recognised in the statement of financial position.

14 Capital management

The Bank's capital management framework is designed to ensure that the Bank is capitalised in a manner consistent with the Bank's risk profile, regulatory standards and economic capital standards. The Bank holds capital in excess of the minimum requirements to achieve the target capital adequacy ratios set by management and regulators.

The Bank's objectives when managing capital are to:

- $\boldsymbol{\cdot}$ $\;$ comply with the capital requirements set by the banking regulators;
- safeguard the Bank's ability to continue as a going concern so that it can continue to provide returns for shareholders and benefits to customers and other stakeholders, and;
- maintain a strong capital base to support the development of its business.

Capital adequacy and the use of regulatory capital are monitored daily by the Bank's management, employing techniques based on guidelines developed by the Basel Committee as implemented by the Reserve Bank of Zimbabwe for supervisory purposes. The Reserve Bank of Zimbabwe requires each bank to maintain a minimum capital adequacy ratio of 12%. The table below summarises the composition of regulatory capital and the Bank's capital adequacy ratio:

composition of regulatory capital and the Bank's capital adequacy ratio:					
Capital adequacy	31 December 2020 ZWL'000	31 December 2019 ZWL'000			
Ordinary paid up share capital	260	260

External Credit Rating

The Bank's external credit ratings as determined by the Global Credit Rating Company ("GCR") for the past five years are summarised

Rating scale 2020 2019 2018 2017 2016 Long term

CAMELS RATINGS

The Reserve Bank of Zimbabwe ("RBZ") last conducted a full scope onsite examination from 28 July to 20 August 2014 and the Bank achieved the highest possible rating i.e. a CAMELS rating of 1. The CAMELS rating uses a rating scale of 1-5 where 1 is strong, 2 is satisfactory, 3 is fair, 4 is weak and 5 is critical. Hence according to these results, the Bank maintained its strong position as measured

RISK ASSESSMENT SYSTEM ("RAS")

The most recent RAS ratings risk matrix assigned by the Reserve Bank of Zimbabwe is summarised in the table below:

SUMMARY RAS - RATINGS

RAS COMPONENT	JULY 2014	
Overall Inherent Risk	Low	
Overall Risk Management System	Strong	
Overall Composite Risk	Low	
Direction of Overall Composite Risk	Stable	

SUMMARY RISK MATRIX FORMAT

	Level of inherent	Adequacy of risk	Overall	Direction of overall
Type of Risk	risk	management systems	composite risk	composite risk
Credit	Moderate	Acceptable	Moderate	Stable
Liquidity	Low	Strong	Low	Stable
Interest Rate	Low	Strong	Low	Stable
Foreign exchange	Low	Strong	Low	Stable
Operational risk	Moderate	Strong	Moderate	Stable
Legal & Compliance	Moderate	Acceptable	Moderate	Stable
Strategic risk	Low	Strong	Low	Stable
Reputation	Low	Strong	Low	Stable
Overall	Acceptable	Acceptable	Moderate	Stable

Low -reflects a lower than average probability of an adverse impact on a banking institution's capital and earnings. Losses in afunctional area with low inherent risk would have little negative impact on the banking institution's overall financial condition.

Moderate - Could reasonably be expected to result in a loss which could be absorbed by a banking institution in the normal course of

High - reflects a higher than average probability of potential loss. High inherent risk could reasonably be expected to result in significant and harmful loss to the banking institution.

Adequacy of Risk Management Systems

Weak – risk management systems are inadequate or inappropriate given the size, complexity and risk profile of the banking institution. $Institution's \ risk \ management \ systems \ are \ lacking \ in \ important \ risk \ profile \ of \ the \ banking \ institution. \ Institution's \ risk \ management$ systems are lacking in important ways and therefore a cause of more than normal supervisory attention. The internal control systems will be lacking in important aspects particularly as indicated by continued control exceptions or by the failure to adhere to written policies and procedures.

Acceptable - management of risk is largely effective but lacking to some modest degree. While the institution might be having some minor risk management weaknesses, these have been recognised and are being addressed. Management information systems are generally adequate.

Strong – management effectively identifies and controls all types of risk posed by the relevant functional areas or per inherent risk. The board and senior management are active participants in managing risk and ensure appropriate polices and limits are put in place. The policies comprehensively define the bank's risk tolerance, responsibilities and accountabilities are effectively communicated.

Overall Composite Risk

Low - would be assigned to low inherent risk areas. Moderate risk areas may be assigned a low composite risk where internal controls and risk management systems are strong and effectively mitigate much of the risk.

Moderate - risk management systems appropriately mitigates inherent risk. For a given low risk area, significant weaknesses in the risk management systems may result in a moderate composite risk assessment. On the other hand, a strong risk management system may reduce the risk so that any potential financial loss from the activity would have only a moderate negative impact on the financial condition of the organisation.

High - risk management systems do not significantly mitigate the high inherent risk. Thus, the activity could potentially result in a financial loss that would have a significant impact on the bank's overall condition.

Direction of Overall Composite risk

Increasing - based on the current information, risk is expected to increase in the next 12 months **Decreasing** – based on current information, risk is expected to decrease in the next 12 months Stable - based on the current information, risk is expected to be stable in the next 12 months.
